Zinc-Nickel Plating

— a **Winner** Standard!

At WINNER HYDRAULICS, any quality-related manufacturing process, like turning, hardening, grinding and honing is carried out within our own factory, providing 100% quality control.

WINNER uses a huge range of CNC equipment and two fully automated hardening units.

In 2014 we invested in the installation of our own state-of-the-art zinc-nickel electroplating unit, additionally guaranteeing perfect corrosion protection.

▼ Zinc-nickel plating is carried out in the factory's in-house electroplating unit to fulfill the highest quality standards.

Zinc+thick film passivation

WINNERcoat®

WINNERcoat®

WINNER's cartridge valves not only offer excellent performance but extremely long service-life. Our standard zinc-nickel plating, plus passivation and sealing, guarantee the highest possible corrosion protection and a reliably repeatable fastening torque.

◀ After a 1000-hour salt spray test according to DIN EN ISO 9227
